

introducing NEW optional\*  
**SUPER EFFECTIVE** charge  
for SUPER-IQ and SUPER<sup>2</sup>IQ units

## **COMP-U-FLEX™**

*This latest Charge method has been developed from its mighty predecessor LIN-R-FLEX™ by adding some more "IQ" to the already brainy precision computed charge termination.*

*The ability to plot and examine the charge curve in the processor memory DURING the charge process was previously developed to precisely pinpoint the TRUE PEAK in the maze of Burps. This same ability is now being utilized also for AUTOMATIC ADAPTING of the Burp intervals and duration to the curve shape which results in EVEN LOWER TEMPERATURE RISE than with the "old" LIN-R-FLEX. Although we definitely expected improved effectiveness of the Flex Charge, the actual results are far BEYOND OUR WILDEST DREAMS. If you like the effects of the "old" LIN-R-FLEX then you will absolutely LOVE our new baby !!!*

- ★ **LOWER TEMPERATURE RISE** brings following:
- ★ **run times, punch and voltage SIGNIFICANTLY** improved not only on poorly performing previously mistreated packs but also on "killer" packs previously nurtured by the "old" mother LIN-R-FLEX and drilled by the well proven father / coach LIN-D-FLEX™ Variable Rate Discharge
- ★ **DRAMATIC IMPROVEMENT** in REJUVENATION success rate
- ★ **LONGER PACK LIFE**
- ★ **ONLY SUPER-IQ AND SUPER<sup>2</sup>IQ OWNERS HAVE THE TRULY FAIR ADVANTAGE TO KEEP THEIR BATTERIES A FEW LAPS AHEAD OF THE REST !!!**
